

The Photovoltaic Systems Group has introduced the first full scale 360 kWp photovoltaic irrigation system demonstrator, with a pumping capability of 60 litres/sec. from 270 m. depth.

During the presentation workshop, held last February 10th in Villena (Alicante), which counted with the participation of 350 attendees and a delegation from the European Commission, the first version of the Technical Specifications for this kind of systems were also presented.

More information on the event as well as Technical Specifications can be downloaded at:
