

Universidad Politécnica de Madrid Master of Science in Photovoltaic Solar Energy

Welcome!

Why should I study a Master on Photovoltaic Solar Energy?

Photovoltaic solar energy is becoming an economically competitive, viable and ubiquitous option for mass production of clean electricity. It will be an important vector for the development of the electricity systems in many countries. Qualified professionals will be demanded for project management and engineering, infrastructure planning, PV manufacturing, research, consulting and academic and professional training.

The host institution: the Solar Energy Institute of the Technical University of Madrid

The Solar Energy Institute of the Technical University of Madrid (Instituto de Energía Solar de la Universidad Politécnica de Madrid or IES-UPM for short), founded in 1979, is the oldest active institution in PV research in the World. More than 60 people from different countries work in virtually all facets of Photovoltaics, from basic science to project development, from materials science to electrical engineering. The Master's professors have led key initiatives for the advancement of Photovoltaics, held PV efficiency records, led flagship research projects and produced top-referred publications. Their educational activities include over one hundred Doctoral Thesis and pioneering teaching of Photovoltaics for undergraduate and graduate students.

Who are we looking for?

The Master is aimed at highly motivated science students and engineers interested in PV technology and with an environmental and sustainable development concern. A good science and technology background is needed in this fast-moving, cross-disciplinary, international field. To be admitted in the program the candidate must have basic knowledge on physics and electronics. Applicable academic degrees include physics, chemistry, materials science, electrical/electronic engineering, mechanical engineering, telecommunication engineering, industrial engineering, etc. If your degree is not in the list, contact us to check your eligibility. In addition, proficiency in English is a must since our Master is a bilingual program where the languages of instruction for the courses are both English and Spanish. Thereby, you must demonstrate an adequate level of English proficiency and basic knowledge of Spanish (or commitment to get it) prior to admission to the Master.

The IES-UPM learning experience

At IES-UPM we are convinced that real engineers, experts and leaders in any technology are forged in the real world. So our Master is a hands-on experience from start to end. In this respect, all photovoltaic infrastructures at IES-UPM are available and used to provide a comprehensive learning experience for students enrolled in the Master. So, during the Master you will produce solar cells using our solar cell manufacturing line; you will measure them using solar simulators in the solar cell characterization lab; you will characterize solar modules in our photovoltaic power plants connected to the grid; you will design, simulate and implement real PV installations, and you will use PV solar home systems to test smart grid strategies, among others ... In summary, every single week during your master you will be engaged in practical labs to get a real grasp of some aspect of the technology.

In addition to this approach we also take full advantage of modern teaching tools and resources, and do use *b-learning* (through a dedicated electronic learning platform based on MOODLE), video conferences, on-line seminars, to supplement classroom lectures and laboratory courses.

The syllabus

The Master of Science on Photovoltaic Solar Energy is a one year program divided into two semesters, from September to July. To complete the master 60 ECTS credits have to be passed with the following structure: 20 ECTS of

compulsory subjects, 25 credits of electives and 15 credits of a Master's Thesis. This effort is equivalent to 1500–1800 hours of study.

FIRST SEMESTER			
Compulsory subjects	ECTS		
Fundamentals of solar cells	4		
Energy and society	4		
Solar cell characterization laboratory	4		
Electives			
Solar cell technology laboratory	6		
Physics of photovoltaic materials	4		
Optical engineering	5		
Electrical engineering of photovoltaic systems	4		
Energy today (Seminar)	4		
SECOND SEMESTER			
Compulsory subjects	ECTS		
Photovoltaic systems engineering	4		
PV modules and systems laboratory	4		
Final Master Thesis	15		
Electives			
Third generation solar cells	3		
Computational laboratory of photovoltaic materials	4		
Solar cells and PV systems simulation laboratory	4		
Building integration of solar energy	3		
Concentrator PV laboratory	4		
Grid connected PV systems	4		
PV market, finance and management (seminar)	4		
Laboratory of electrical engineering for Photovoltaics			

Admission, enrollment and cost

Your admission to the Master of Science in Photovoltaic Solar Energy depends on your prior education. To be accepted to the Master studies, applicants should hold a degree equivalent to 240 ECTS credits.

The admission process is done via <u>HELIOS</u> web; there you have to provide your personal data and upload some documentation (application form, scan of your passport, Résumé in English, diplomas and degrees, transcript of courses with grades, ...). Detailed instructions on what documentation is needed depending of your country of origin is available at the web platform. You can also check these links:

- ADMISSION PROCEDURE FOR MASTERS (in English)
- ADMISION AL MASTER (en Español)

The web tool to manage admissions for course 2017-18, opens **February 1st and closes in July 9th**. In case there were remaining vacancies by that date, the admission period would be extended till late July, but don't be late: there are a limited number of available positions in the Masters.

The admission committee will process your application and will decide about your admission. In case admitted, you will be notified via email with additional instructions about how to proceed with your enrollment.

Once you have been admitted it is time to start arranging your student Visa (in case needed). Please, check with the Spanish consulate in your country what documentation is needed in your particular case. Be aware that the processing of a student Visa may take several weeks or even months so don't procrastinate!

Enrollment

Once admitted, the process of enrollment essentially consists in selecting the courses you will take the first semester and paying for the corresponding tuition fees. This can only be done at designated periods that the University establishes and these have not been decided yet for course 2017-18. Tentatively, the enrollment periods will be as follows:

- **Period 1**: July September 2017 (exact dates to be defined)
- **Period 2**: February 2018 (exact dates to be defined)

To process your student Visa (if needed) you will need a payment certificate. Therefore, for students needing a Visa only the first period is of practical relevance since the processing of the Visa will take several weeks and thus registration in September is not an option as the course starts in late Sept.

Costs

Tuition fees to enroll to the Master of Science on Photovoltaic Solar Energyare officially set by the Council for Education, Culture and Sports of the Government of Madrid. These are published once a year, usually in August, and are applicable for the course starting in September. The complete program has an overall workload of 60 ECTS.

The publication of the official prices for course 2017/2018 is expected in August 2017.

As a guide for course 2017-18 pre-enrolment, the official prices for the current academic year 2016-17 (see BOCM 191 of August 11, 2016 at www.emes.es) are as follows:

TUITION FEES PER ECTS CREDIT (€/ECTS)					
Master of Science on Photovoltaic Solar Energy, course 2016/2017					
# of enrollmen	t	Second	Third	Fourth and subsequent	
Students from UE member states	52,65	84,07	84,07	84,07	
Foreign students (*)	84,07	84,07	84,07	84,07	

* Pursuant to the Royal Decree 83/2016 and according to article 81.3 b) of the Organic Law 6/2001 of 21 December concerning Universities, the Universidad Politécnica de Madrid establishes that **foreign students of legal age, not having the status of permanent residents** (with the exception of those coming from UE Member States as well of those covered by the community rules) will be charged the amount corresponding to the **second and subsequent enrollment fees**.

In this sense, the authorization for stay granted to foreign students according to Royal 557/2011, of 20 de April, approving the Regulation of the Organic Law 4/2000, of 11 January, concerning rights and freedoms of foreign nationals in Spain and their integration into society, does not imply the status of permanent residents.
