1. Description

1.1. Subject details

Name of the subject	93001314 - Simulation And Optimization Software For Photovoltaic Systems
No of credits	3 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 1
Tuition period	September-January
Tuition languages	English
Degree programme	09BP - Master Universitario en Energia Solar Fotovoltaica
Centre	09 - Escuela Tecnica Superior De Ingenieros De Telecomunicacion
Academic year	2022-23

2. Faculty

2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Cesar Dominguez Dominguez (Subject coordinator)		cesar.dominguez@upm.es	- -
Ruben Nuñez Judez		ruben.nunez@upm.es	Sin horario.
Pablo Garcia-Linares Fontes		p.garcia-linares@upm.es	Sin horario.

* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

3. Skills and learning outcomes *

3.1. Skills to be learned

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo.

CB6 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB7 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB8 - Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicios

CB9 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CE2 - Conocimiento, análisis y propuestas de nuevos conceptos, métodos o dispositivos para la conversión fotovoltaica.

CE5 - Diseño, análisis, caracterización, planificación e instalación de componentes y sistemas fotovoltaicos de propósito general, autónomos o conectados a la red.

CE7 - Analizar, diseñar e implementar sistemas fotovoltaicos de complejidad media-alta

CG5 - Gestión de la información: buscar y gestionar recursos bibliográficos adecuados con eficiencia, aprender a continuar los estudios de manera ampliamente autónoma como base para la futura actividad de investigación e innovación

CG8 - Aplicar metodologías, procedimientos, herramientas y normas del estado del arte para la creación de nuevos componentes tecnológicos; Construir nuevas hipótesis y modelos, evaluarlos y aplicarlos a la resolución de problemas

CG9 - Comunicar juicios, y conocimientos a audiencias especializadas y no especializadas, de una manera

razonada, clara y sin ambigüedades

CT3 - Uso de la lengua inglesa: comprender los contenidos de clases magistrales, conferencias y seminarios en lengua inglesa; redactar en inglés informes y artículos científico-técnicos usando herramientas informáticas; realizar exposiciones públicas en inglés de trabajos, resultados y conclusiones de investigación, por ejemplo, en las asignaturas del Máster o en congresos de carácter mayoritariamente internacional o en estancias en centros extranjeros, todo ello con la ayuda de medios informáticos audiovisuales

3.2. Learning outcomes

RA34 - Formación general sobre las aplicaciones, el uso práctico de los sistemas fotovoltaicos y una perspectiva sobre la tecnología fotovoltaica

RA37 - Conocer las herramientas específicas de ingeniería para diseñar y evaluar sistemas fotovoltaicos

RA14 - RA4 - Capacidad para analizar los resultados

RA35 - Conocer los aspectos prácticos de la instalación

RA15 - RA5 - Relacionar los principios básicos con los aspectos prácticos

RA13 - RA3 - Conocer las herramientas de simulación más utilizadas para células y sistemas FV

RA36 - Aplicar los servicios y herramientas disponibles en el mercado al diseño de sistemas fotovoltaicos

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

4. Brief description of the subject and syllabus

4.1. Brief description of the subject

The aim of this course is to develop the student's competencies for the analysis, design and optimization of photovoltaic (PV) systems and their components using the most standard software tools used in industry (PVsyst) and the academia (PVLIB Python). The course presents typical PV module performance models as a function of the operating conditions, as well as procedures for accessing, modeling and translating solar resource and weather data in order to predict the power generated by a complete PV system at a given location.

The methodological approach is based on a series of short lectures on the modeling and analysis of PV systems and their components, complemented by tutorial and hands-on laboratory sessions using open source (PVLIB

Python) and commercial (PVSyst) software tools, with which realistic case studies will be developed. Students will be asked to develop a series of individual tasks or small PV system projects throughout the course to put into practice the concepts seen in class and acquire sufficient mastery of the tools. These will be especially useful in the rest of the subjects of the PV Systems itinerary.

Tutorial and practical sessions will train students on the software tools to be used and develop realistic case studies using PVLIB Python (open source) and PVSyst (industry standard commercial software):

PVLIB Python tutorials: Implementation of a PV system modeling chain with open source libraries.

1 Python and PVLIB toolchain setup

2 Accessing irradiance and weather data

3 Modeling solar resource and in-plane irradiance

4 Estimating module temperature

5 The single diode model

6 Predicting module output power from operating conditions

7 Modeling a PV generator by combining module strings and AC inverters

PVSyst tutorials: modeling PV systems using commercial software

1 Production estimation of grid-connected PV systems with PVSyst

2 Sizing and simulation of a stand-alone PV system with PVSyst

4.2. Syllabus

1. Meteorological and solar resource data sources
 - 1.1. Accessing weather databases and evaluating data quality
 - 1.2. Generation of synthetic series
2. Solar resource modeling
 - 2.1. Estimating solar position and angle of incidence
 - 2.2. Estimating missing irradiance components
 - 2.3. Plane-of-array irradiance: transposition to the generator plane
 - 2.4. Modeling solar tracking and back-tracking
3. Electrical and thermal modeling of photovoltaic panels
 - 3.1. 5-parameters single diode model. Identification of parameters for a commercial PV module.
 - 3.2. Modeling the effect of irradiance and temperature
 - 3.3. Empirical models of I-V parameter variation
 - 3.4. Cell temperature estimation
 - 3.5. Estimating model accuracy
4. Modeling losses in a grid-connected PV system
 - 4.1. Partial shading
 - 4.2. Modeling optical (incidence angle modifier) and spectral losses
 - 4.3. Effect of soiling
 - 4.4. DC and AC electrical losses
 - 4.5. Modeling inverter performance
5. Modeling of stand-alone systems

5. Schedule

5.1. Subject schedule*

Week	Classroom activities	Laboratory activities	Distant / On-line	Assessment activities
1	1. Meteorological and solar resource data sources Duration: 01:00	PVLIB tutorial 1: Python and PVLIB toolchain setup Duration: 01:00		
2	1. Meteorological and solar resource data sources Duration: 01:00	PVLIB tutorial 2: Accessing irradiance and weather data Duration: 01:00		
3	2. Solar resource modeling Duration: 01:00	PVLIB tutorial 3: Modeling solar resource and in-plane irradiance Duration: 01:00		
4	2. Solar resource modeling Duration: 02:00			
5		PVLIB tutorial 3: Modeling solar resource and in-plane irradiance Duration: 02:00		
6	3. Electrical and thermal modeling of photovoltaic modules Duration: 01:00	PVLIB tutorial 4: The single diode model Duration: 01:00		
7	3. Electrical and thermal modeling of photovoltaic modules Duration: 01:00	PVLIB tutorial 5: Estimating cell temperature Duration: 01:00		
8	3. Electrical and thermal modeling of photovoltaic modules Duration: 01:00	PVLIB tutorial 6: Predicting module output power from operating conditions Duration: 01:00		
9	4. Modeling losses in a grid-connected PV system Duration: 01:00	PVLIB tutorial 7: Modeling a complete PV generator by combining module strings and AC inverters Duration: 01:00		
10		Tutorial session on PVLIB Python projects Duration: 02:00		Individual project 1: modeling a PV system with PVLIB Python Continuous assessment Presential Duration: 00:00

11		PVSyst tutorial 1: Production estimation of grid-connected PV systems with PVSyst Duration: 02:00		
12		Tutorial session on PVSyst projects Duration: 02:00		Individual project 2: Advanced PV modeling with PVLIB Python Continuous assessment Presential Duration: 00:00
13	5. Modeling of stand-alone systems Duration: 01:00	PVSyst tutorial 2: Sizing and simulation of a stand-alone PV system with PVSyst Duration: 01:00		
14		Tutorial session on PVSyst projects Duration: 02:00		Individual project 3: Modeling a grid-connected PV system with PVSyst Continuous assessment Presential Duration: 00:00
15				
16				Individual project 4: Modeling a stand-alone PV system with PVSyst Continuous assessment Presential Duration: 00:00
17				Final quiz exam Final examination Presential Duration: 01:00

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The schedule is based on an a priori planning of the subject; it might be modified during the academic year, especially considering the COVID19 evolution.

6. Activities and assessment criteria

6.1. Assessment activities

6.1.1. Assessment

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
10	Individual project 1: modeling a PV system with PVLIB Python		Face-to-face	00:00	25%	/ 10	CB9 CG5 CG8 CG9 CT3 CE5 CB10 CB6 CB8
12	Individual project 2: Advanced PV modeling with PVLIB Python		Face-to-face	00:00	15%	/ 10	CB9 CG5 CG8 CG9 CB7 CT3 CE5 CE7 CG3 CB10 CB6 CB8 CE2
14	Individual project 3: Modeling a grid-connected PV system with PVsyst		Face-to-face	00:00	20%	/ 10	CG8 CG9 CB7 CT3 CE5 CE7 CG3 CB10 CB8 CB9 CG5

16	Individual project 4: Modeling a stand-alone PV system with PVsyst		Face-to-face	00:00	10%	/ 10	CB9 CG5 CG8 CG9 CB7 CT3 CE5 CE7 CG3 CB10 CB8
----	--	--	--------------	-------	-----	------	--

6.1.2. Global examination

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
17	Final quiz exam		Face-to-face	01:00	30%	/ 10	CB9 CG5 CG8 CG9 CB7 CT3 CE5 CE7 CG3 CB10 CB6 CB8 CE2

6.1.3. Referred (re-sit) examination

Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
Collection of individual projects: the student may rework and present (again or for the first time) every		Face-to-face	00:00	70%	/ 10	CB9 CG5 CG8 CG9 CB7 CT3 CE5

individual project for a new assessment before the date of the extraordinary exam						CE7 CG3 CB10 CB6 CB8 CE2
Final quiz exam		Face-to-face	01:00	30%	/ 10	CB9 CG5 CG8 CG9 CB7 CT3 CE5 CE7 CG3 CB10 CB6 CB8 CE2

6.2. Assessment criteria

The most important part of the student's work and assessment will be based on the individual project assignments, plus a final quiz test to evaluate the student's understanding of the modeling concepts seen during the course.

7. Teaching resources

7.1. Teaching resources for the subject

Name	Type	Notes
Handbook of photovoltaic science and engineering	Bibliography	A. Luque, S. Hedgedus (eds.). Wiley, 2nd ed., 2011.
PVLIB Python documentation	Web resource	https://pvlib-python.readthedocs.io/
PVsyst documentation	Web resource	https://www.pvsyst.com/help/index.html
Electricidad solar fotovoltaica. Volumen II: Radiación solar y dispositivos fotovoltaicos	Bibliography	E. Lorenzo. Progensa, 2006.
Electricidad solar fotovoltaica. Volumen III: Ingeniería fotovoltaica	Bibliography	E. Lorenzo. Progensa, 2014.

8. Other information

8.1. Other information about the subject

This course promotes some of the United Nations Sustainable Development Goals (SDGs), in particular:

- SDG 7: Ensure access to affordable, reliable, sustainable and modern energy for all. Target 7.2 By 2030, increase substantially the share of renewable energy in the global energy mix
- SDG 13: Take urgent action to combat climate change and its impacts. Target 13.3 Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning
